

Vimrc

When a user opens vim as a text editor, vim will first look at the .vimrc file and load the custom settings in the file to customize the layout of vim such as changing the syntax color or the number of spaces in a tab.

Setting up vim rc:

- 1) Change to the home directory by typing 'cd'
- 2) Search for the '.vimrc' file by typing 'ls -a'
 - a. .vimrc is a hidden file and will not be shown with just 'ls'
- 3) Upon/create this file with 'vim .vimrc'
- 4) Modify this file with the settings shown below then save

My choice of .vimrc settings:

```
1 set autoindent
2 set number
3 set smartindent
4 set tabstop=3
5 colo desert
6 set shiftwidth=3
7 syntax on
```
